XakNet Team ru

XakNet_team

XakNet is a team of Russian patriots who care about the fate of their native state.

We are opposed to any illegal activity. However, in conditions when an information war is launched against our citizens, we see no other way out but to do what we do. We, as citizens of Russia, with all due respect to our Ukrainian colleagues, are forced to respond to any actions directed against our compatriots.

We do not hide behind the mask of abstract "Anonymous". We have a clear position, we do not plan to harm ordinary citizens, threaten to write off funds and cause panic. All our actions are aimed at conveying a simple message - we do not accept a security threat to our country.

We will respond in an absolutely mirror image to any attempts to agitate our citizens for destabilizing activities by spreading false information on hacked resources.

For every hack/ddos in our country, similar incidents will occur in Ukraine.

XAKNET in the early days - HACK-FAQ for beginners (Discuss here)

Attention! All similar questions on the forum will be deleted. Where to begin

I don't know anything, but I want to become a hacker. Where to begin?

But I still really want to, what should I do?

Why does a hacker need a non-standard way of thinking?

Eh .. and I'm such a lamer that I can't even use search engines.

But if everything can be found, why then a forum?

What is the right way to ask?

Damn, but I asked on the forum, but they didn't answer me even after a week. Yes, they don't know anything!

What about popular hacking sites?

There is really a lot of information on the net for beginners, but there are so many terms! What is a exploit, proxy, IP, deface, etc.?

What is the necessary knowledge to become a hacker?

I heard that all hackers don't use Windows is it true?

My firewall tells me from time to time about RST attacks, or port scans from websites I visit. Is someone following me?

Where to begin

- I don't know anything, but I want to become a hacker. Where to begin?
- Believe me, if you want to live in peace, it's better not to start ...
- But I still really want to, what should I do?
- Well, then you should start by not asking this question in the forum.

First, let's define who a hacker is: this is a creature that has a computer (well, this is a must), two hands (one for a mouse, the other, of course, for beer), a head (for headphones), and a refrigerator (well, beer is not warm drink!). If you have all this, then you have every chance to become a real hacker ;) Oh, yes, I almost forgot, a hacker must also have a non-standard way of thinking!

Why does a hacker need a non-standard way of thinking?

Everything is very simple. A hacker is on "you" with a computer and with the Internet, which means that he does not need anyone's help - he can find all the information in search resources. If you learn this simple truth, you can quickly achieve success. Believe me, the yandex.ru and google.ru databases contain answers to 90% of questions, so if you don't want to wait several days for an answer, use this advantage. This is their "little secret"; how do they know so much. And don't be afraid to be original!

Eh .. and I'm such a lamer that I can't even use search engines.

Stop. A lamer is only one who does nothing. Remember the 90%? Never forget this number. We go to yandex.ru, enter the query "Search for information using search engines" and voila - we get to the page <http://www.poisinfo.net/stat/st1.php>, where everything is described in detail how to search and where. Read on and in 15 minutes you'll be a web search expert. :)

But if everything can be found, why then a forum?

Firstly, a forum is a community, people united by common interests. They discuss everything from the weather to interesting hacks, but that doesn't mean they're happy to deal with your problem.

Secondly, remember once more about 90%. There are 10% of questions that are really not yet answered in the search engines, or they are so well hidden that they can never be found. Well, then you have every chance to ask your question first. Since he has not yet met, most likely, your descendants, faced with the same problem, will fall on your topic. So try to get it right.

What is the right way to ask?

A wonderful article on how to ask questions: <http://ln.com.ua/~openxs/articles/smart-questions-ru.html>. Try to read at least the key points, this will greatly increase the chance that you will be answered and helped.

Damn, but I asked on the forum, but they didn't answer me even after a week. Yes, they don't know anything! It means that you have not read this wonderful article: <http://ln.com.ua/~openxs/articles/smart-questions-ru.html>. Spend 10-15 minutes so that you don't lose days later ... Believe me, it's worth it. If you can't even do that, let's not become hackers, okay? :) What are the most popular hacking sites?

Here is some of them:

- securitylab.ru
- antichat.ru
- web-hack.ru
- hackzona.ru
- xaknet.ru
- www.xakep.ru
- void.ru
- security.nnov.ru
- anonymous.ru
- inattack.ru
- emanual.ru
- sources.ru
- codenet.com

In addition, here is a very useful site with programming docks: doks.gorodok.net

There is really a lot of information on the net for beginners, but there are so many terms! What is a exploit, proxy, IP, deface, etc.?

Firstly, many incomprehensible words can be found here: <http://www.xakep.ru/magazine/xa/049/024/1.asp>.

In addition, there is one universal way: Open yandex.ru, and write there, for example, "what is a proxy". By the way, you can get acquainted with the rudiments of artificial intelligence of this search engine by seeing how it converts your request into "a proxy is ...". Therefore, do not hesitate to ask him questions like "what is ...", he knows everything. Let it be our secret :)

What is the necessary knowledge to become a hacker?

First, you need to have a good understanding of at least one of the operating systems, Windows or *nix.

Know at least basic shell commands, both Windows and *nix. Knowledge of one of the interpreted languages is highly desirable, preferably PHP or perl. Without knowledge of HTML, JavaScript, CSS, it will be very difficult. The ability to write Windows programs is very useful. Accordingly, it is C/C++, Delphi or Visual Basic. The ability to quickly find the information you are interested in in search engines will be a definite plus.

Knowledge of the principles of functioning of a computer, networks and the Internet in general. Of course, you can't cover all this at once, start with one thing and master it gradually. Over time, you will understand for yourself what is useful and what is not.

I heard that all hackers don't use Windows is it true?

Not really. The matter is that the majority of servers are unix systems. That is why the better you know niks, the more you will be "lucky" in hacks. And the best way to find out the system is to put it on your computer. In addition, Unix is very attractive for efficient networking. Some technologies that have been successfully implemented in nix are not even supported by Windows, while individual programs like Corel Draw do not yet have analogues in * nix. So in what OS to work, this, in principle, is more convenient for anyone. If you want to get acquainted with some niks, but do not want to part with Windows, then you can leave it and install Linux as an additional OS. If you are interested, you have a direct path to

<http://www.cnews.ru/reviews/articles/index.shtml?2005/09/30/188154>

Online hacking FAQ

How to hack soap on mail.ru and yandex.ru?

I will probably disappoint you, but mail.ru mail, or yandex.ru, cannot be hacked. Why? <http://mail.ru> is perhaps the most popular mail system. The mail.ru server administration has huge advertising revenues, they lure users with advertisements in print media and on television, do you really think they will spare money for good security specialists? Forget it. And, most importantly, never get fooled by the offers "hack any soap on mail.ru for \$5" - you will be thrown in the most impudent way. Lots of ways to fool suckers. The most common one is "a secret mail robot was found that tells the password from any mailbox if you send it your password", they also offer various programs for hacking the mailbox "100% working and for only \$25".

But stop, not everything is so sad. What? Did I say mail.ru can't be hacked? I was joking :) If you can't find a bug in the server itself, why not find it in the head of the mailbox owner? So, attention, the most common ways to hack mail on mail.ru. Of course, they also roll for other mailers.

Well, let's get started:

1. The first step is to try to find the answer to the secret question. The chance is low, but worth a try. For example, the answer to "favorite dish" is most often "kebab", or "dumplings".

2. Let's say soap vasya-pupkin@mail.ru. You look in search engines (Yandex, Google and Rambler are enough) for all the sites where he appeared, write out all the nicknames under which he walks around the network and all the sites on which he is registered under these nicknames. Of course, if the login is like alex, then nothing will work, you need a unique

After that, you explore all the sites found. If a person has been online for a long time, it is more than likely that a year or two ago he registered with his password on some superforum2.h14.ru, which will not be difficult to crack. The password for the account on the forum is often the same as the password for the soap.

3. We send a Trojan to the person in the hope that he is a big-eared lamer and will bite on superFoto.jpg.....exe. You can send a password-protected csmaps.zip archive on behalf of his friend, saying that there is a new cool CS map. Enter the password in the letter. As a rule, users check the password-protected antivirus archive, and then open it without a hint and run the exe file. For these purposes, the Pinch Trojan is quite suitable.

4. Let's say nothing helped. A person monitors the soap, changes passwords, etc.

Not everything is lost. Again we go to the page for remembering the mail.ru password and look for a retreat pass for soap. There is? Then you can try to find out the second soap and repeat the whole procedure from the beginning. Perhaps his man guards not so zealously.

How to hack soap on less secure mailers: newmail, hotmail...?

1. The most pleasant thing is to find the bug yourself: for example, a vulnerability in the web interface: perhaps XSS is hidden somewhere, or even SQL-inj.

2. If the admins have not yet scratched themselves to make protection against brute, you can try to reset the password. There are tools for this, for example, the good old Brutus AET under Windows, or THC-Hydra under niks.

3. Use social engineering methods described for mail.ru

How to hack server ***? Can you help?

Each hack is a creative process. And everyone breaks the way he likes. But, first of all, of course, it is worth thoroughly studying the "experimental" server. What system is on it, what services, does the admin follow patches and updates, etc. With sufficient experience, a hacker can find out all this with only a browser and a telnet client, but for a beginner, the easiest way is to use a vulnerability scanner. For example, SSS scanner under Windows, or nmap under *nix.

Did the scanner find a vulnerability and happily report it? Do not rush to the forum with the question "nmap gave me ***, what to do with it" - you will most likely be sent. Type the keywords from the phrase about the vulnerability into a search engine (google is better) - I'm almost sure that you are not the first one who was going to ask such a question! And where there is a question, there is an answer :)

If the server has an old bad version of one of the services, try to find exploits for it. They are most often available on sites such as securitylab.ru.

For example, the scanner showed that the ProFTPD 1.2.7 FTP daemon is hanging on port 21. We open <http://securitylab.ru>, enter ProFTPD into the search and get to this page: http://www.securitylab.ru/poc/221962.php?phrase_id=242509. As you can see, you can immediately download an exploit that will give you root, and this, as you understand, is very good :)

How to use exploits?

Very simple. Run the plot with the desired parameters, and it will do everything for you. The problem is that most of the plots are open source only, that is, a regular *.txt file with C++ or perl code. If this is C ++, then the plot will have to be pre-compiled. You don't need to compile perl or php plots, they are executed directly on the server. If you have a shell, just upload the file there and run it. If you have nothing but your native Windows, you will have to download and install one of the emulators. For example cygwin and activePerl. You can, in principle, use denver (denwer.ru), but then you will most likely have to manually add some network libraries that are not in the default configuration.

Remember that most source code sprites have "fool-proof", that is, specially made syntax errors, so if you are an absolute zero in programming, you will have to look for an already corrected working sprite.

How to compile a plot under Windows?

Well, a very detailed guide is given here: <http://www.razrushitel.front.ru/complite.html>

How to run a plot under Windows?

Press WinKey + R (or Start -> Run), there cmd and press ENTER. A black window will appear, in which you need to run your plot. You can move through the directories with the command CD directory name, go from drive C: to drive D: you can use the command CD /D D:

A list of all files and folders can be obtained with the DIR command. Other commands can be found by typing HELP.

As a rule, help on using the plot is given when you run it without parameters, or with the --help or -h options.

How to run a plot on a shell? I can not.

As a rule, help on using the plot is given when you run it without parameters, or with the --help or -h options.

How to hack a site?

Maybe you will be upset, but there is no miracle program lomalka_saitov.exe, no "hack site" spell, no word that you need to enter on the site to make it hack.

Experience, knowledge, and perseverance are the three pillars on which the most successful hacks are based. Read the descriptions of already committed hacks, which are just to the heap on the network, everything is described in detail there. Read 5-10 of these descriptions and you will get an idea of how to hack a site. At least roughly ;)

I can only give a few recommendations:

- It is very important on which server the target site is located. Perhaps the admin does not monitor the server and does not patch the system in time. You need to be aware of all the latest vulnerabilities in order to immediately notice this. You can find information about the server, for example, at www.whois-service.ru.

- If this is a server of a large hosting company, like valuehost, you can be sure that it will not work to hack the server, and it makes no sense to set the scanner in the hope of finding a bug service. In this case, it is most reasonable to start by looking for bugs on the site itself, perhaps the programmers made a mistake.

- Start by looking for installed "third-party" scripts: forums, chats, guestbooks, etc. Or maybe the site itself is some kind of public web portal like php-nuke. Then it remains only to find out the version of the script and check if any vulnerability was found in it.

A good article about hacking websites: www.hackzona.ru/hz.php?name=News&file=article&sid=2045

What vulnerabilities are most common on websites? The main vulnerabilities are undoubtedly:

1. SQL injection (SQL injection)

SQL injection refers to the insertion of SQL metacharacters into user input that results in a change to the database query. As a rule, crackers first determine the vulnerability of the site to such an attack (for this, a single quote character is sent to the form, or to one of the url parameters). The consequences of such an attack

How to find out the ip of a user on the network?

1. Communicate with him via ICQ. Many icq clients like Miranda IM, SIM, etc. show ip in user information. If you do not want to download advanced clients, you can use special programs such as uin2ip, or patches for standard versions of ICQ. In addition, the website www.leader.ru has a UIN Locator. You enter the UIN and you get an IP, the main thing is that the person is not offline.

2. Get the user to send you an email. Regardless of whether he uses the web interface, or a mailer like TheBat!, his ip will be indicated in the message headers. In TheBat! The headers can be read by right-clicking and selecting "show RFC-822 headers" from the context menu. Look for the text "Received: from", which is closest to the body of the letter - immediately after these words will be the sender's IP address.

3. Find out which irc channels the user is on and look there

4. If nothing helps, but you really want to, don't despair.

If you have a hosting where you can run perl/php (if not, you can register for free, for example, on h15.ru), then here's another way - you choose a page that has a photo of some random person (let's say, <http://masters.donntu.edu.ua/2001/ggeo/pavelchak/>), you copy the entire HTML code into a new file, for example, info.html and save it on your site. Next, you create another index.php file with the following content:

```
<?$message = "Date: " . date("d.m.Y H:i:s") . "\nIP: " . $REMOTE_ADDR . "\nServer: " . gethostbyaddr($REMOTE_ADDR) . "\nHTTP_X_FORWARDED_FOR: " . $HTTP_X_FORWARDED_FOR . "\nPage: " . $SERVER_NAME . $REQUEST_URI . "\nQuery: " . $QUERY_STRING . "\nComing from: " . $HTTP_REFERER . "\nBrowser: " . $HTTP_USER_AGENT . "\nFilename: " . $SCRIPT_FILENAME;
```

```
mail("admin@mail.ru", "Requested ip", $message, "From: admin@mail.ru\nContent-Type: text/plain; charset=windows-1251", "-fadmin@mail.ru" );
```

```
$fp = fopen("log.txt", "a");
```

```
fwrite($fp, str_replace("\n", "\t", $message) . "\n");
```

```
fclose($fp);
```

```
include("fil.html"); ?>
```

Of course, soap admin@mail.ru must be replaced with your mailbox. This page (index.php) will not visually differ from the original, but logs with ip and user system parameters will be sent to you by mail and duplicated in a log file (check that this file has write permissions, for example 666, or 777) . In addition, if a person is on the local network, you will also get his local ip, and if he goes through a proxy, then you will have the ip of both the proxy and his own.

Now your task is to lure the user to this page. Of course, you should not just send it via ICQ. My favorite way is this: "Hello [here is the name of the person whose ip you want to know], do you remember Tanya ([and here is the link to your page with a photo])? She said you can help me with the design (hacking, cactus breeding, etc.). 100% valid :)

I know the ip of the computer / user, how to hack it

IP is the unique address of a computer. Just as each inhabitant of the planet must have a unique home address (Country, city, street, house, apartment) to send mail, each computer must have its own unique IP address so that other computers on the network can send information to it.

Therefore, your question is tantamount to the question "how to break into a friend's apartment if I know his home address."

I hope you understand that just knowing ip is not enough.

You can read more about the ip-address here: <http://www.sluh.freenet.kz/p8/12.html>

How to hide your ip?

If you want to hide, i.e. change your IP, the easiest way to do this is to use anonymous proxies. However, not all so simple.

Usually, when accessing a site, two IP addresses are passed to the web server: REMOTE_ADDRESS and HTTP_X_FORWARDED_FOR.

REMOTE_ADDRESS - this is your ip-shnik: by which they ban, which admins see, etc.

HTTP_X_FORWARDED_FOR is an additional parameter that stores your real IP. For example, if you're on a local grid, this would be your internal address.

Keep in mind that even if you go to the network through a proxy, and your IP has changed to the IP of the proxy, your old IP will still be lit in HTTP_X_FORWARDED_FOR!

Therefore, for complete anonymity, you need to select only those proxies that are marked as high anonymous or elite proxy. These servers do not transmit any information about your old IP and are completely confidential. Unless, of course, it's not a server of special services agents;)

How not to sleep during a break-in?

1. Climb the network only through an anonymous proxy so as not to expose your ip
2. Cover your tracks... To do this, use some log cleaner like vanish2

Where to get anonymous proxies and what to do with them?

Anonymous proxy lists:

- www.samair.ru/proxy
- www.web-hack.ru/proxy
- www.freeproxy.ru/ru
- www.proxy4free.com
- www.anonymizer.com
- www.anonymizer.ru

A couple of proxy checkers:

- www.checker.freeproxy.ru/checker/
 - www.samair.ru/proxy/proxychecker/
- and much more

Legion - Cyber Spetsnaz RF

June 08, 2022

I . Introduction

Legion is a project from KILLNET , which is a voluntary independent movement of talented professionals focused primarily on DDoS.

II . Internal regulations

The Legion is designed to fight against enemy countries and protect the civilian population of the Russian Federation from outside aggression in the information space. It is not easy to solve such tasks alone, therefore, the Legion attacks has implemented specialized detachments to prevent the ill-wishers and, accordingly, use methods of influencing them. Thus, in order to maintain the atmosphere in internal conversations, certain rules have been established that the current members of the group must follow, otherwise responsibility will follow.

Note : the rules may be further changed by the leadership of the Legion without the knowledge of the participants.

NDA (Non-disclosure agreement) or "non-disclosure agreement".

Getting into our ranks, of course, you are aware that the information received in the closed chat should in no case be transferred in any form to third parties. Working moments should not be on public display. Violation of this paragraph entails sanctions in the form of exclusion from the detachment for an unlimited period without the right to amnesty.

2. The expected behavior of the squad members.

The conversation is an opportunity for direct contact between the Commander and members of the movement. To avoid destabilization of the situation in the chat, recommendations and restrictions are given that will help in building effective interaction, as well as cultural communication.

- If you are absent for more than 2 days without notifying the Commander, you leave the squad without warning.
- Of course, we expect you to show generosity, courtesy, decent behavior, showing respect not only to the leaders, but also to all members of the detachment. Providing assistance to allies in the team is also welcome.

Forbidden : It is forbidden to interrupt elders or assistants during the announcement of important information.

- Evasion from providing reports on work in the detachment. It is not welcome to incite (attempt to provoke) conflicts in any form, disrespectful attitude towards the participants, the Commander and other senior persons (even in a "joking" form!)

Therefore, we urge you to refrain from such undertakings.

- Sending text, graphics, sound and other materials that directly or indirectly violate the laws of the Russian Federation.
- Placing videos or photographs containing pornographic content, inciting interethnic, intercultural, interethnic hatred.
- It is unacceptable to use foul language, insult the participants and the Administration (even in a veiled form).
- Advertising third-party resources that are not related to the Legion (without coordination with the leadership of the Legion)
- An attempt to expose (deanon) any of the members of the squad who (s) did not violate (s) the current regulations of the Legion.
- Dissemination of information (rumors) that does not correspond to the reality of information (disinformation).
- DDoS attacks, espionage, hacking or other measures of influence directed against the Russian Federation and allied countries.

note: violation of any item from this list is punishable, therefore the Commander has the right to issue a warning, or to exclude the violator, depending on the situation (the leadership of the Legion may intervene and act at its discretion).

3.Security

This type of activity may not suit everyone, because there are many facts that affect your personal safety. If this does not scare you and you are ready to act, you should think about how to hide your real data from prying eyes as much as possible.

- Stay in the background, you don't need to run away immediately after your candidacy is approved and tell everyone in a row: "I'm a hacker from KILLNET". Any leads to your true identity endanger both the detachment in which you are a member and yourself.

4. "Look" of the participant

- Those involved in the detachment must use a nickname, profile picture and account description that does not contain offensive or pornographic content, including advertising of third-party resources that are not related to the Legion (at the discretion of the Commander or the leadership of the Legion).

III . The main composition of the Legion

The staff of the movement is large and varied. Aspiring to join and help us in a brave cause will be taken into account and considered, so you just need to meet certain criteria. This section contains a complete list of Legion units, and you can familiarize yourself with.

Legion Russia

Legion - Cyber Spetsnaz RF 2

June 08, 2022

Specializing in DDoS

First of all, not only experienced fighters are taken into units of this type, but also beginners who have been trained or already have basic knowledge. Requirements: being active in ongoing events (gatherings) from the Commanders, compliance with the current regulations, the presence of VDS / VPS, high performance on dstat.cc or cyber-hub.pw ($\geq 100K$; check with the squad leader).

List :

- Sakurajima
Contact: @sakurajima_support
- RAYD
Contact: @DEVIANT100
- Phoenix
Contact: @chapaev_901
- [NEW] NBP
Contact: @kurumi_the_killer
- [NEW] WIDOW
Contact: @lifemiles
- [NEW] DedSec
Contact Contact: @notsupportusername
- [NEW] Alpha
Contact Contact: @MUDHACK
- [NEW] SPQR
Contact Contact: @ddgpost_legionRU

Zarya

Those who are just interested in this topic can be trained in a special private channel of the Legion. Apply --> *here* After fulfilling the requirements that are posted in the pinned message, you will be invited to the next chat, where it will already be possible to join one of the squads.

2. Hacking, OSINT, creative tasks and information warfare

Tasks solved in the Legion are not limited to DDoS. We are also interested in finding professionals who know their business. We single out the following specialists: hackers, programmers, osinterers, miners, virus analysts (Reversers). Separately, this list is also in demand: musicians, vocalists / announcers, video editors, artists, designers, photoshoppers.

Note : No training provided, experienced candidates required.

Zarya

Communication contact: H45H13 Dial

conditions: * here * <https://telegra.ph/Nabor-Zarya-06-05>

The official image of the "Zarya" detachment

SPARTA

Purposes : cyber sabotage in NATO countries and exposure of their officials, cyber intelligence, financial activities, theft of private information, destruction of Internet resources.

Communication contact: SPARTA (@killnet_sparta)

The official image of the squad "SPARTA"

SPARTA

4. The initiative to create your own squad

Everyone who truly knows how to lead the team forward, controlling the actions of the participants at the proper level, having experience in working with DDoS attacks (presence of botnets, VPS / VDS) and any (possible) achievements (example: "I was able to put in alone with its capacities, the entire state website of the enemy country https://link_which_was)

For questions regarding this topic, contact Who. @CyberEducational

IV. Additional information.

The current chapter is a reference. Useful links, reliable sources, so as not to fall into the hands of ill-wishers who are trying to hide behind a false name for their own benefit.

Contacts of officials (see the first page diagram):

KillNet - for all questions.

H45H13 - Commander of the Legion.

Who - about creating your own squad.

Кіт БХС - President.

AlphaM65 is the KillNet security service.

Reliable sources :

WE ARE KILLNET is the main KillNet channel.

WE ARE KILLNET is a backup channel.

LEGION is a project from KillNet.

Inform Zarya - insiders from the Zarya detachment.

Beregini is an ally.

RaHDIt is an ally.

REvil is an ally.

Anonymous Alliance is an ally.

Anonymous Austria is an ally.

Hackers

Experience in information security
Experience in identifying and exploiting Web vulnerabilities
Experience in identifying and exploiting vulnerabilities on Windows and *nix systems
Knowledge of post-exploitation, pivoting and pinning techniques on windows and *nix systems
Strong knowledge of common programs and frameworks for testing (For example: Burp Suite \ Fiddler, ZAP Proxy \ Netsparker, Metasploit, PowerSploit, Nessus \ Nexspouse, BloodHound, Cobalt, impactet, responder, mimikatz, sqlmap, etc.)

Confident working with exploits, their modification and execution
Understanding current information security threats, attack vectors and vulnerabilities
Experience with databases of vulnerabilities;
Ability to read code in one or more languages: C/C++, Python, Java, JavaScript, PHP;
Confident linux user
Knowledge of English
Experience in participation in bug bounty programs, CTF, information security competitions
Confident programming skills in at least one programming language
reverse engineering experience
Proficiency in social engineering
Virus spread experience

Programmers

Proficiency in a programming language (Python, C#, C++, PHP, Perl, JS, Golang)
Knowledge of Bash/Powershell scripting languages
Skills in collecting information based on open sources (OSINT), developing tools for collecting, processing and analyzing data
Working with exploits, their modification and execution
Working with streams
Reading someone else's code
Knowledge of English
Experience in creating cryptors, malware (stealers, ransomware)
Ability to optimize code
Experience with Linux operating systems and containers
Experience with relational databases
Virus spread experience
Proficiency in social engineering

Osynters

Geosynthetic
Breaking through (GB ≠ breaking through)
intelligence service
Availability of bases ≠ experience
Creation of reports (understandable and readable, and not just throwing information into the chat)
Virus spread experience
Proficiency in social engineering

Virus analytics-operators\Reverse

Knowledge of modern threats, methods, tools and techniques for conducting attacks, as well as methods and tools for their detection and response.
Knowledge of network protocols, architecture of modern operating systems and information security technologies
Assembly Knowledge
Basic knowledge of OllyDBG, Hiew, IDA tools;
Basic knowledge of Windows architecture, PE files;
Reverse skills x86/x64; .net
Experience with malware (Creation, distribution)
Knowledge of English
Proficiency in social engineering

Musicians

Experience in writing music (background, intro, independent works) from two years
Working with sound: recording, mixing, etc.
Experience in writing music in different directions
DAW skills: ProTools, Logic Pro, Cubase, Ableton, FL, MMM + knowledge of vst plugin sets
Having a portfolio of tracks that demonstrates the ability to connect at different stages of music production
musical taste
creative thinking
Imagination
Playing musical instruments
Recommendations from artists
musical education

Vocalists\Announcers

Beautiful vocals \ Clear pronunciation, pleasant voice
musical taste
creative thinking
Imagination
Having a portfolio
Having a quality microphone
The ability to record your own vocals
Playing musical instruments
Working with sound: recording, mixing, etc.
musical education

Video editors

Work experience (Wideblogging, TV, production studios, etc.)
Knowledge of Adobe After Effects, Premiere, their alternatives
Having a portfolio
creative thinking
Sense of style and humor
Knowledge and experience of compositing and color grading
Creative approach to solving non-standard problems
Experience in content planning
Ability to produce high quality music
Knowledge of Audition and Photoshop
Blender, Unreal Engine
profile education

Artists, designers, photographers

Work experience (graphic designer, illustrator, artist, etc.)
Having a portfolio
Ability to draw well. especially the characters. But not only.
universalism. Need to draw promo art of the character - OK. Need to draw a tank - also OK
fluency in Adobe graphics packages (Photoshop, Illustrator, InDesign), CorelDraw, etc.
image skills: clipping, retouching, color correction, collage, etc.)
artistic taste, efficiency, commitment, accuracy and attention to detail
creativity
Taste and flair for trends
art education\Art school\courses
Experience in creating decals/stickers for printing
Experience in creating flyers
Experience in creating logos
Knowledge of the basics of prepress processes and the production of preparing files for printing

Война с фейками
@warfakes

In connection with the growth of the audience, it was decided to reorganize its work:
We are restricting group entry. Now entry by request.
The following groups will be created in the following areas:

- general chat
- DDoS attack coordination
- A group of pentesters
- creative group
- web development group
-

Now about each group in more detail:

general chat

Purpose: Conversation on topics of interest, only persecution, Nazism and dill propaganda are not welcome. We also drop goals here.

Adding via <https://t.me/+0lxZ9UKJWttlNjE6>

DDoS attack coordination

Purpose: Dos tech support chat where targets and tech info will be posted

The link to add can be obtained in the general chat

A group of pentesters

Purpose: Coordination and execution of attacks on Ukrainian infrastructure.

Added via @annaivanovna542 @m1ke_m1ke @ras_dv

creative group

Purpose: Creation of creative (media content) for distribution on various sites, as well as search for materials on various topics

Adding via @Kaa_Z

web development group

Goal: Creation of resources to combat Ukrainian propaganda

Added via @annaivanovna542

Given the high volume of complaints from the Ukronazi units, I recommend keeping this page, because if we get banned, here I will post information about where we will move.

beregini
Ukrainian hacker group "Beregini". We know everything.
CONTACTS: @bereginifeedbackbot BG14@protonmail.com
Website: <https://bg14.ru>

We "Beregini" #BG14 opened our telegram channel, now we are there with you! Now an interesting material about the moral and psychological support of the Armed Forces of Ukraine is being prepared for publication on our website. The article and supporting links will be published tomorrow.
Dear Ukrainians!

We are Beregini - Ukrainian women's hacker movement. We stand for peace in Ukraine, we do not need war. The oligarchs are pushing our country to collapse, sowing chaos and devastation. Poverty and hunger are already at the doorstep of every Ukrainian family. Freedom has become just a sign behind which moneybags rob their people in order to build palaces for themselves, and transfer their multimillion-dollar accounts offshore. From the TV screens they zombify us, telling us that Russia is an enemy, and she unleashed a war. Meanwhile, former bandits and urks, straying into gangs and calling themselves patriots, kill, rape and rob civilians. And behind all this horror is the president and his government, the Ministry of Internal Affairs, the Security Service of Ukraine and the Ministry of Defense. The bloodsuckers of the Ukrainian people came to power. And only they need the blood of this war, the victims of which have already become tens of thousands of Ukrainians.

Do you want to live in such a country?
We are not!
Therefore, we declare war on them.
Tremble bastards and wait for our punishment.
Soon...

Olga Mirosnikova

Bereginya Quotes:

"Methods of influence - they are well-known, have practically not changed since the time of Goebbels - intimidation, lies, staging. We can already tell that Ukrainians were tasked with calling and writing to their Russian relatives and friends and telling that civilians are dying "that Ukrainians' houses were destroyed, that drunken Russians steal toilet bowls, they are surprised at Nutella at breakfast in ordinary Ukrainian families. This method of propaganda lies has long been known - the more monstrous the lie, the faster they will believe in it ," Bereginya says.

"First of all, they analyze the local situation, identify some weaknesses. For example, take the same opposition. It is much easier to act through the opposition, to spread this news, how many oppositional Telegram channels exist now that are ready to pick up any of them news and start distributing it in their networks ," At the same time, they do not hesitate to disseminate information about "atrocities" and "looting".

Bereginya is a goddess that is quite dominant in Slavic mythology. This goddess is able to shapeshift and turn into other Slavic goddesses or even acquire a human form and turn into a woman.

Ethnographic records describe Bereginya as associated with the cult of water, trees and vegetation, sometimes described as a protector of nature life. It was believed that Bereginya is an embodiment of the entire aura of nature and its powerful force. The ancient Slavs honored the character of Bereginya and made dolls that would represent this deity. According to the folklorists of Slavic mythology, the cult of Bereginya was represented through an abstract image of an ancient female power that was associated with collective unity. The legend of Bereginya showed her as someone who helped people who are honest and who lived by the principles of truth and honor. Some people considered Bereginya a patron spirit while others would stick to this personification of community power and alliance with nature. Other Names of Bereginya: Depending on the version of the tale (or the legend), Bereginya also appeared under the name of Lada, Leyla, Dana and Zhiva. Her character was imagined through many forms and aspects.

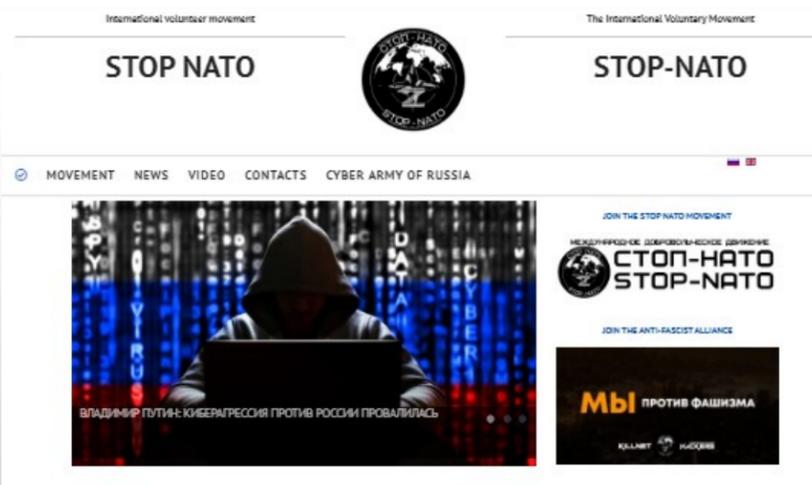

CYBER ARMY calls on everyone to support and help our country! КИБЕР АРМИЯ РОССИИ ru cyberwar_world - Part of the Stop NATO Movement
 We call on all concerned programmers in the world to consolidate and put an end to neo-Nazism in Ukraine and the aggressive policy of the US and NATO leadership together. Join the Russian Cyber Army . Let's all say together #StopNATO #Killnet <https://stopnatorf.ru/ru/kiber-armiya-rossii>

cyber_frontZ КИБЕР ФРОНТ Z RU

We welcome everyone who is not indifferent and loves his Motherland!

We all went to bed as ordinary people, and woke up as enemies to the whole world. We are forced to ask for forgiveness just because we are Russians. And this is at a time when the genocide of the Russian-speaking population has been purposefully going on in Ukraine for 8 years now, the Kyiv junta is bombing the civilian population of Donbass.

Russian attempts to force Kyiv and its Western patrons into peace and stop the killing and persecution of the Russian-speaking population in Ukraine have come to nothing. The West turned a blind eye to the crimes of the Kyiv regime. For the past few months, Ukraine has been pumped up with weapons and money. Kyiv wanted to resolve this issue by force, destroying hundreds of thousands of Russians.

Fortunately, their plans failed to materialize. Special Operation Z is in full swing, one by one the cities are freed from neo-Nazi groups.

The more successfully our soldiers fight the plague in Ukraine, the more fakes and information attacks appear on us. The Ukrainian propaganda machine is in full swing. They wish us death, and collapse of Russia.

Only together we can resist these attacks! We are opening the CYBER FRONT of Operation Z to repulse in the information field the propagandists of the Kyiv junta financed by the Western world.

We appeal to all caring Russians and our fraternal peoples. We need:

-  Social commentators
-  Spammers
-  Content Analytics
-  Programmers
-  IT specialists
-  Designers

You can join our ranks - just subscribe to this channel.

Working conditions, including paid vacancies: @lineren

Z Glory to Russia! V

Who we are

In connection with the launched full-scale information and economic war against the Russian Federation, **the Information and Coordination Center** was established. **The ICC** is a group of like-minded people whose main goal is to combat the spread of false information about the activities of the Russian Federation and the Armed Forces of the Russian Federation.

Our priorities are:

1. Blocking channels for the dissemination of hostile propaganda in social networks and instant messengers
2. Blocking of propaganda sites that spread false information
3. Investigation into violations of the rights and freedoms of the state

Important information

Our hackers **have ICC_H@ckTeam** carried out a successful attack on The UkropropagandandistsUA. Another victim was the Ukrainian TV channel UATV (<https://uatv.ua/en/>)! Your own creeping line is running. And this video, you could watch during the broadcast of the channel on Youtube. A complete substitution of ether has been made. The people of Ukraine must know the true situation at the front and stop Zelensky from the war to the last Ukrainian! Together with our like-minded people, we will continue to shed light on the events taking place.

Current guidelines

To participate and contribute to the information confrontation, read the [Toolbox](#) section, where you can learn how to work most effectively in each of the areas. If you have information about a channel or site that spreads fake information, denigrates the Russian Federation or violates human rights, and it is not on our list, [please contact](#) us.

At the moment, the coordination of actions is taking place on the following resources:

Telegram

Tools (links to tools to follow)

A propaganda campaign of unprecedented scale has been launched against Russia to incite Russophobia and discredit the actions of the Armed Forces of the Russian Federation and the people's republics. The Ukrainian side uses the most dirty methods of propaganda - lies, hate speech and bloody provocations. All this is spreading on Ukrainian and anti-Russian foreign websites, in all social networks and instant messengers.

On this page, you can find instructions and guidelines for effectively combating Ukrainian propaganda.

Opposition in social networks and instant messengers

The simplest, but at the same time effective way, is to leave complaints about inappropriate content. Depending on the size of the community and its content, it may take a different number of complaints and time to block it.

Below are links to guides on countering anti-Russian propaganda on various social networks:

[Telegram instruction](#)
[Instructions VKontakte](#)
[YouTube instruction](#)
[TikTok instruction](#)
[Viber instruction](#)

Our center coordinates the blocking of inappropriate content. You can find the list of communities and channels where hostile information is published in the Target designation block.

NO-NAZI website

To counteract nationalist and anti-Russian sites, we have developed a tool to disrupt their performance.

Thanks to this tool, anyone who wants to help in our rightful cause of information warfare can make a significant contribution. All you need to do is go to the site, select goals and click one button. Everything else will be done for you by NO-NAZI.

If you have any questions regarding the use of this tool, please refer to the instructions for use.

ZDOS software tool of mass destruction

You can make the most serious contribution by using our specialized software, which automatically connects your computer to a single cyberfront to disrupt the performance of targeted resources - ZDOS.

The program is very easy to use - you just need to download it and run it. See instructions for more details.

DobroDOS software tool

Another tool from our developers that will help in the information confrontation. It has a built-in function for adjusting the number of threads to reduce the load on the processors of weak computers.

See the link for installation and use instructions.

DobroDOS software tool in 2048 game format

Our developers have created an application that will make the information confrontation not only useful, but also exciting. We present you DobroDOS in 2048 game format.

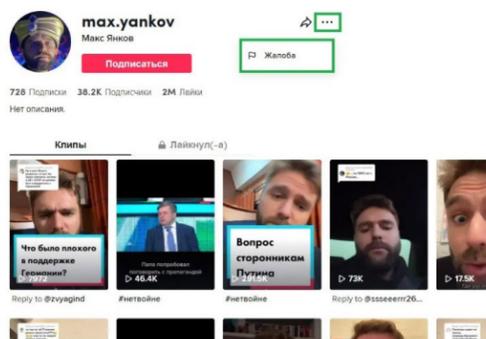

See the link for installation and use instructions.

Opposition on the social network TikTok

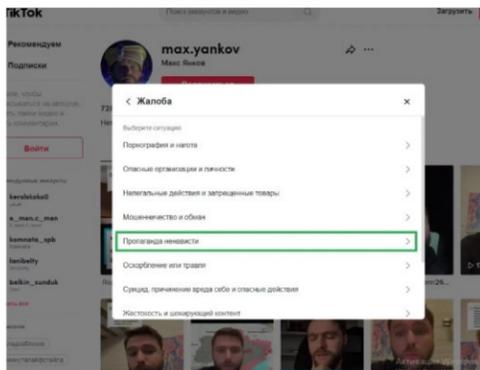

Back

How to submit a complaint

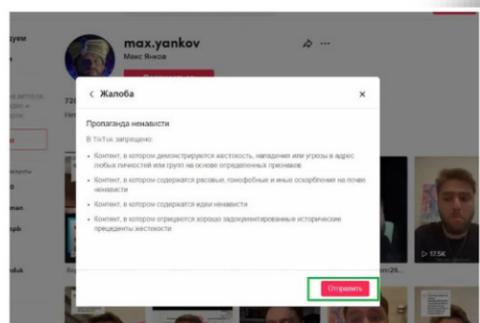

1 . To report an account, click on the three dots next to the username. To complain about a specific video - after a short press on it, a context menu will appear. Select "Report" from the context menu

2 . Specify the category of the complaint

3 . After selecting a category, a brief description of the prohibited content will appear. Confirm by clicking the "Submit" button, or select any other category (back arrow)

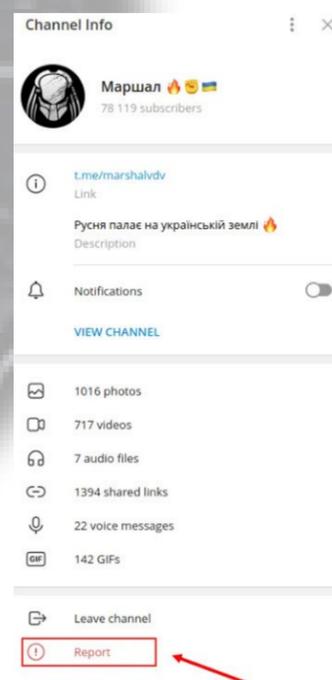

Counteraction in the Telegram messenger

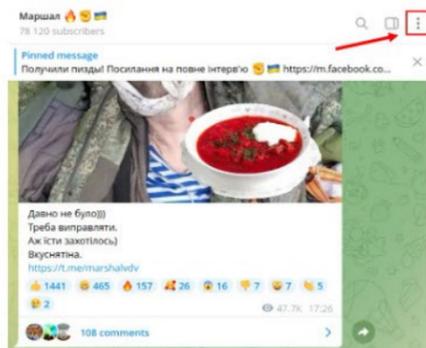

Back

Sending complaints to channels and individual posts

1 . Go to the target channel, click on the three dots in the context menu, find the item "Complain" (Report). For iOS devices, you need to click on the channel image, the "Report" item will be in front of the "Leave channel" button

2 . In the window that opens, select the appropriate type of complaint. In most cases, hostile content falls under the Violence, Personal Details, or Other categories.

Report message

- Spam
- Violence
- Child Abuse
- Pornography
- Copyright
- Illegal Drugs
- Personal Details
- Other

Cancel

3 . Leave the text of the complaint and send

Telegram also has the ability to send a complaint to a separate post. Calling the context menu for complaining about a specific post is carried out by a single tap (for mobile devices) or by right-clicking (for Telegram Desktop) on the post. The further process is similar to sending a complaint to the channel.

Recommendations: The most guaranteed effect is achieved by sending daily complaints in English to the last 10 posts of the target channel.

Sample text for sending complaints: This channel publishes uncensored images of graphic cruelty and calls for violence against civilians and war prisoners.

Opposition on YouTube video hosting

Back

Moderation rules

In order to leave a complaint on YouTube, you must be a registered user of the video hosting (requires a Google account).

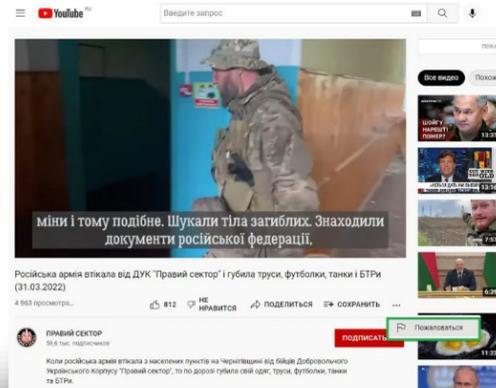

There is a certain list of categories of prohibited content on the video hosting, therefore, if you find a video that falls under one of the categories, feel free to send a complaint.

The following types of content are not allowed on YouTube:

- materials created by criminal or terrorist organizations ;

<https://support.google.com/youtube/answer/2802027>

The complaints mechanism also applies to channels, comments under videos, broadcasts and other content. You can find detailed information about this in the relevant section on the platform website. Sending complaints about videos with footage of abuse of prisoners of war and killed soldiers YouTube has a separate report form for such videos. An excerpt from YouTube's content moderation policy:

How to submit a takedown request for a video that shows death or serious injury

We understand the desire of the relatives of those who were seriously injured or died not to capture these events on video and not to make them public. If you find a video that shows your loved ones in one of these situations, and want to request the removal of this content, fill out a special form. Please keep in mind that the final decision is ours. When reviewing the request, we will take into account the public interest in the video and its eventual significance.

Counteraction in the social network VKontakte

Sending complaints to a specific person

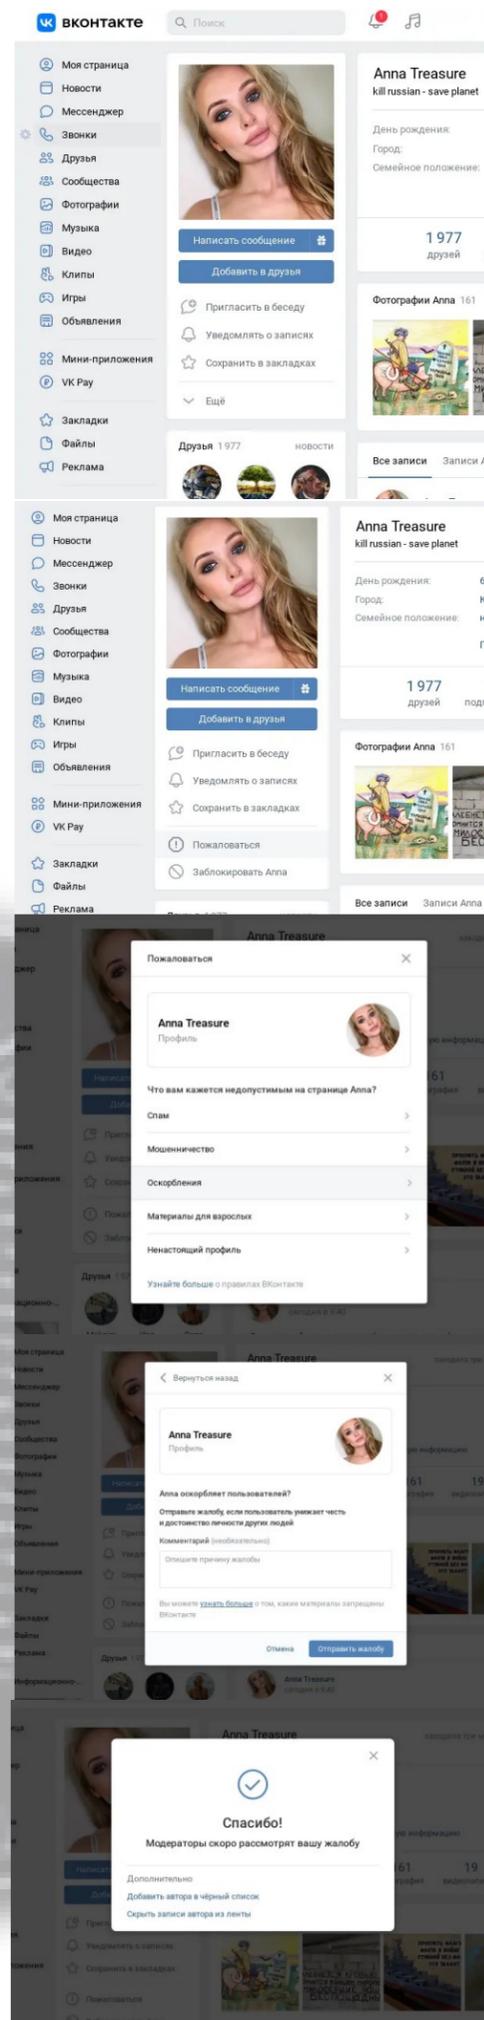

1 . Go to the landing page, click on "More" under the user's profile picture

2 . In the menu that opens, select "Complain"

3 . In the window that opens, select the type of complaint

4 . Enter a detailed description of the complaint and send

5 . Upon successful submission, you will see a corresponding message.

Recommendations

VK very carefully checks all complaints and their correspondence to reality. The documentation says that even one, but correctly drafted, complaint is enough to block a user/public.

Sample text for sending complaints:

This user insults other members of the community, distributes links and materials in the public domain to resources prohibited by the legislation of the Russian Federation, calls for violence and persecution against Russian citizens. Please take action to block this user!

Counteraction in the Viber messenger

Sending complaints to a channel

1 . Select the community you want to report, then click on the three dots in the top right corner of the screen

2 . Select "Report channel" from the context menu

3 . State the reason for the complaint

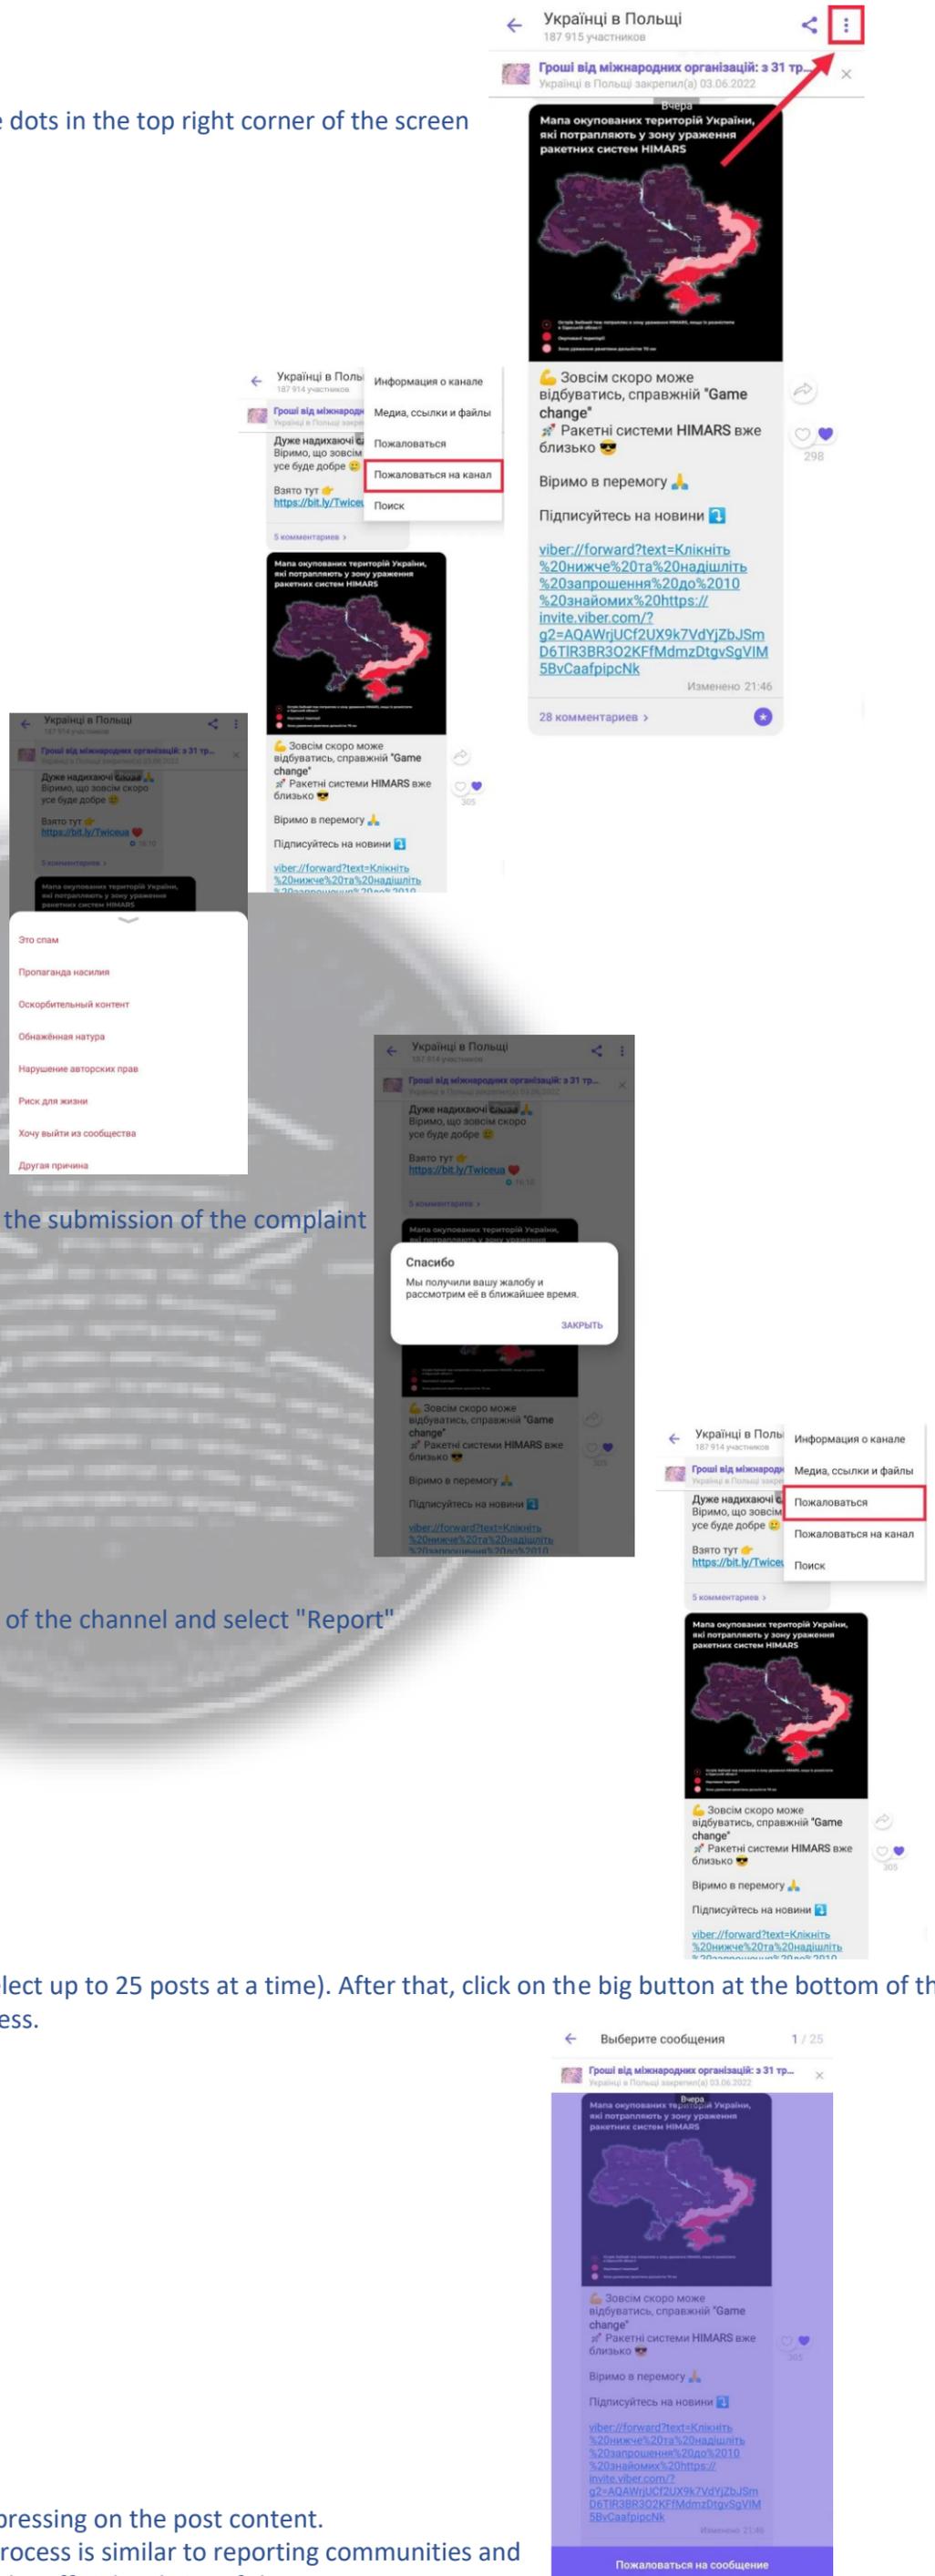

4 . After selecting a category, you will receive a message confirming the submission of the complaint

Sending complaints to individual posts

1 . To report individual posts, you must also open the context menu of the channel and select "Report"

2 . With a single tap, select the posts you want to report (you can select up to 25 posts at a time). After that, click on the big button at the bottom of the screen. The next steps are similar to the community complaint process.

3 . The context menu of an individual post can be called up by long pressing on the post content. Viber also has the ability to report chatbots and sticker packs. The process is similar to reporting communities and posts. You can familiarize yourself with the detailed instructions on the official website of the messenger .

DobroDOS program

All instruments

Short description

The key advantage of the new program is customization flexibility. You can adjust the number of processes to reduce the load on your PC. The program also takes a list of targets directly from our community to Telegram, which allows you to quickly adjust the direction of the attack. We will announce all changes in the list of targets for DobroDOS in our communities.

Our developers have prepared a version for Windows users and Android smartphones, a Linux version is coming soon!

How to use

Download the corresponding program archive:

Windows version

Installer for Android

PC usage:

Unpack, go to the dobrodos folder and run dobrodos.exe.

Before starting the program, you can adjust the number of threads in the corresponding field. The higher the value, the more significant contribution you make. We recommend reducing the number of processes if the program is heavily loading your computer.

Click on the "Start" button.

Usage on Android:

Open the apk file, after installation, the program icon will appear in the menu.

The mobile version has basic functionality (start and stop), the interface is similar to the PC version.

Adjusting the number of processes in the mobile version of the application will be available in the next update.

After starting the program, initialization will begin - getting a list of sites and collecting links from the post of our TG community. If an error occurs at this stage, a message with its description will appear, after which the program will close.

If everything goes well, information about the successful collection of sites and their links will be displayed, and a list of received sites will appear in the block on the left. Information about the number of sent requests will begin to appear in the right block.

To stop the program, click on the "Pause" button.

To clear the output window (right block), click on the "Clear" button.

DobroDOS program in 2048 game format

Short description

This software product is an analogue of DobroDOS, but in a game format. You just play the game 2048, and the program itself will start working in the background. We combine business with pleasure!

This product can only be installed on Android phones!

How to use

Download .apk file from this link .

Install and launch the game

Just enjoy everyone's favorite game 2048 :)

NO-NAZI website

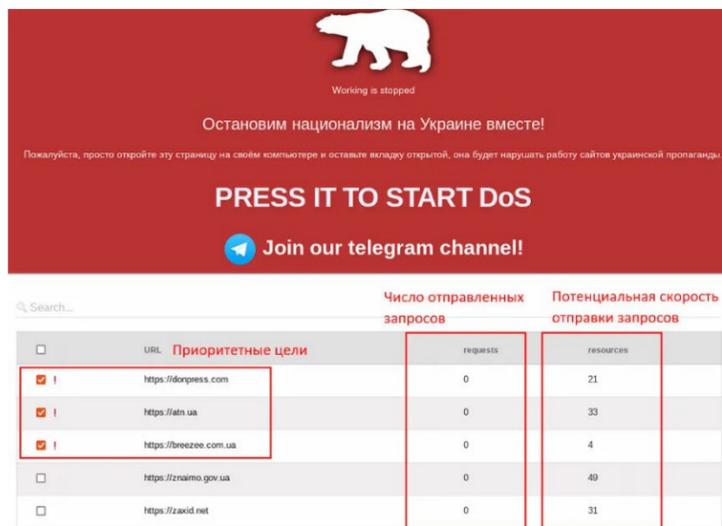

Short description

NO-NAZI is a tool to disable nationalist and anti-Russian sites by automatically sending a huge number of requests. If the server of the target site is not able to process a large number of requests, its availability is violated - visitors will receive errors when trying to access it.

Efficiency directly depends on the number of participants - the more people launch NO-NAZI, the more requests will leave, therefore, the higher the probability of "setting" the goal.

When working with the site, we recommend using VPN services to increase the efficiency of the tool!

How to use this tool:

We go to the site .

Select the target resources by checking the box next to it.

The list of target sites is constantly updated. If you have suggestions - write to us .

Coordination of common efforts is carried out by assigning priority goals - they are marked with an exclamation point.

Priority goals are updated on a regular basis, which we report in the "News" section, as well as in our VKontakte and Telegram communities.

Press the button "PRESS IT TO START DoS" .

After pressing the button, the work will start, opposite the selected goals in the requests field , the number of sent requests will be displayed.

We leave the tab with the site open, otherwise the requests will not go away!

Answers to frequently asked questions (FAQ):

Does it really work? How to check?

You can check the progress of our tool by opening the browser console (F12), Network tab . There you will see a list of outgoing requests to the target sites.

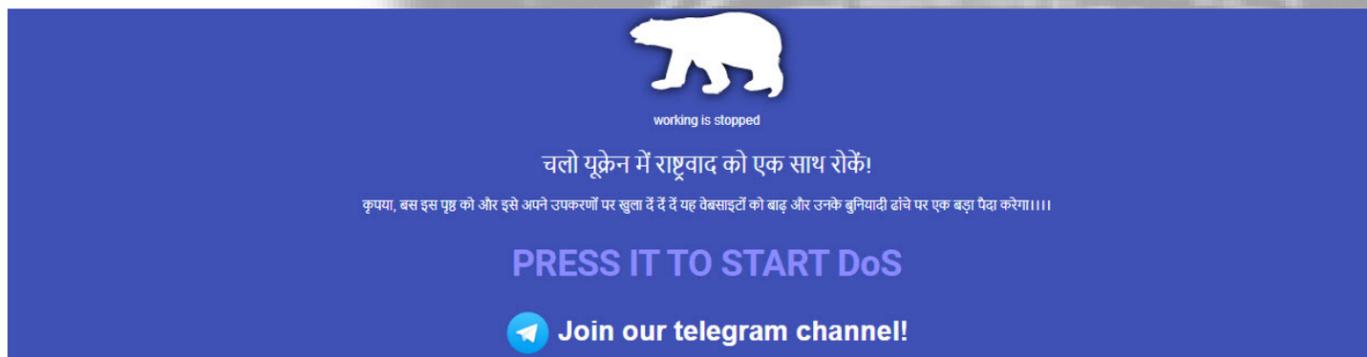

The results can be viewed on any resource that checks the availability of sites, for example here . If, when checking the target site via HTTP, it gives the majority of errors (red fields), then everything worked out, and the target site "lay down".

Is your site secure?

Our site is absolutely safe and protected from third-party interference. If you have any doubts, feel free to check with any antivirus tool.

Selecting a large number of destination sites from the list may increase the CPU usage of your PC/phone. Calculate the number of targets based on the power of your device!

Let's stop nationalism in Ukraine together! Please, just open this page and let it open on your devices it will flood the websites and create a big one on their infrastructure.(Originally in Hindi)

ZDOS program

All instruments

Short description

ZDOS works by analogy with the NO-NAZI site and gives the same effect on target sites. It is not yet available for mobile devices, but it has a number of advantages compared to the site:

- improved coordination scheme - you do not need to select priority targets, all ZDOS users concentrate their efforts on the designated targets, the probability of success is higher.
- ease of use, you can leave it in the background and go about your business (for NO-NAZI to work, you need to keep an open tab in the browser).
- does not depend on third-party factors, since it is hosted only on your PC (the site may sometimes be unavailable for various reasons).

How to use

Download the program archive according to your operating system.

Linux version

Windows version

The downloaded archive contains two files - the executable file of the program (for Linux - zdos.elf, for Windows - zdos.exe) and a file with targets - sites.

Run the program file.

The program will automatically load the targets from the sites file and start its work!

Please note that this software can load the processor of your PC! If you have a weak computer, do not run ZDOS at the same time as other resource-intensive programs (browsers, games, etc.).

Voluntary assistance

Our project is successfully carrying out its activities to destroy the information field of the enemy. We firmly believe that we are fighting on the side of good against absolute evil.

Many people want to support our project and we open such an opportunity!

We need to procure enough important funds to help our friendly unit. On our own, we purchased some of the equipment, spending all our money and we need your help!

We plan for the next purchase:

underwear (Panties, T-shirts, socks).

Tea, buckwheat, cigarettes, stew, sweets, pasta.

4 pairs of shoes 43 / 2.44 and 45 p.

4 unloading.

4 tactical helmets.

2 go pro cameras. (this is for reporting to our channel) - you can 4, but if possible.

Maskhalats 5 pcs.

Balaclava 35 pcs.

Walkie-talkie pro level 5 pcs. (Batteries for them)

A quadcopter for short distances worth 45k, preferably with a remote control (we will look for a cheaper one). The last copter is used only at night. And a small copter was lost near Nikolaev.

We are opening a collection for assistance and purchases for the following wallets. We will be glad to any amount from you!

RNKB Bank: 2200 0202 2603 6277

Sberbank: 4276 3000 6849 0328

Bitcoin: bc1qqxl6qe7tzrllsmmafrn3d0rgaqwyq2fv3ufkv3

Immediately upon completion of the purchase, we will transfer it to the department, which will definitely take a photo of the acceptance. We will also show the current move!

The rest of the funds will be partially spent on re-equipping us personally for registration and security, and we have unclosed moments, but not so global. Hope we make it!

Collection coordinator:

Telegram: @IKC_FantomspyY
results

We are proud to announce that thanks to your solidarity and indifference, our combat units, clearing Ukraine from the Nazis, have got essentials and some technical means on which the success of the offensive operations of our troops directly depends:

Quadcopter

Thermal imager with infrared direction

Anti-glare binoculars

Phone for communication and control of the copter, which was presented to our fighters by one of the Crimean stores

Personal medical packing for 12 people (hemostatic, dressing)

Caps 12 pcs.

Gloves 10 pairs

Underwear 10 sets

5 pairs of quality trekking shoes raincoats

Underwear sets 50 pcs. per company

Balaclava 50 pcs.

Headset Terminator 25-5G 1pc.

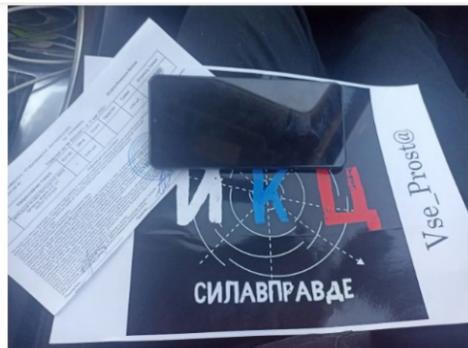

Headphone Terminator 33-5G 2 pcs.

Blocker "Zavesa-9 NST"

As soon as the purchased funds are delivered to their destination, the guys will definitely send a video greeting to you and me between fights!

If suddenly you have any questions about the purchased assistance, write the fundraising coordinator to our friend @IKC_FantomspyY
