Andrey Gaev

Python developer – Group-IB - Global Cyber Security Company
Moscow, Russian Federation

Общие сведения

Hello! Glad to see you in my page :)

I'm working as Python developer at one on the most interesting russian company. My interests also include machine learning sphere and ability to apply this knowledge in our everyday life.

Feel free to contact me, if you have some interest offer.

Опыт работы

Group-IB - Global Cyber Security Company

Python developer

декабрь 2018 - Present

Москва, Россия

Develop and maintain processing for ML algorithms.

Here we develop such kind of ML algorithms which are aimed to user behavior on sites, mobile apps and other places. We analyze a big set of features to detect fraud from potential hacker.

Currently I'm responsible for develop, refactor and update data processing for our algorithms and all other stuff which belongs to a source code. We use RabbitMQ and Redis as a base for our processing. All backend for algorithms written on Python 3.

Further more, I participate in RnD tasks and work with such libs like Pandas, Numpy, Matplotlib etc.

CROC

2 года 11 месяцев

Junior Systems Engineer

апрель 2017 - декабрь 2018 (1 год 9 месяцев)

Москва, Россия

Work on web-application development direction.

Backend stack include such technologies like:

1) PostgreSQL (ORM + native SQL/plpgsql) - create complex logic not only on backend server side, but right in database with plpgsql procedures,

2) Ruby (+ Ruby on Rails) - work on modification Instructure Canvas LMS and build some private applications.

3) Python (+ Django/Django CMS) - build learning system where business logic moved on database layer (to increase performance), also build task tracker based on React.js in frontend and REST services in backend structure.

In frontend I have experience with:

1) jQuery - create simple async statefull components.

2) Backbone.js - create component to represent dynamic tree structure with ability to create/delete/update nodes.

3) React.js - (with state control by Redux). Create one-page application to manage some kind of tasks. Also use Router to build complex sitemap without page reloading.

4) CSS/Sass/Scss - create mixtures and functions to effective styles organize.

5) Bootstrap 4 - fast developing of page layouts.

Creating unit tests for every project. Try to use TDD methodology.

All projects are under version control: Git, Mercurial.

Data Center Engineer

февраль 2016 - апрель 2017 (1 год 3 месяца)

Russian Federation, Moscow

Образование

Московский Государственный Технический Университет им. Н.Э. Баумана (МГТУ)

Магистр, Компьютерные системы и сети · (2017 - 2019)
