This section contains current information on the ship composition of the Russian Navy. The section data is constantly being adjusted in order to provide the most accurate information on the current composition of the domestic Navy.

The Russian Navy includes the following formations: 4 fleets - the Baltic Fleet, the Black Sea Fleet, the Northern Fleet and the Pacific Fleet, as well as the Caspian Flotilla.

The Navy is intended for armed protection of Russia's interests, conducting combat operations in sea and ocean theaters of war. The Navy is capable of delivering nuclear strikes on enemy ground targets, destroying enemy fleet groups at sea and bases, disrupting enemy ocean and sea communications and protecting its own sea transportation, assisting ground forces in operations in continental theaters of military operations, landing amphibious assault forces, participating in repelling enemy landings and performing other tasks.

The tables below show **the current combat ship composition of the Russian Navy** by fleet, as well as the general table of the Russian Navy as of 2024. The "yellow" color of the cell with the name of the submarine, warship or combat boat means that they are currently in reserve, undergoing repairs or modernization.

Last update of the current list of ships of the Russian Navy: **April 25, 2024**
