About Us

What is MONTI?

Non malicious, specialized software, created with purpose to show the security issues inside the corporate networks.

MONTI uses strong symmetric encryption combined with RSA, that's mean that data impossible to recovery without our private key.

In our understanding - we are some kind of a cyberpunks, we randomly test corporate networks security and in case of penetration, we ask money, and publish the information about threats and vulnerabilities we found, in our blog if company doesn't want to pay.

For example, imagine the situation: villians intruding the building company's network (huge developer who specializes on sport objects), those villians doesn't care about money, they are crazy fanatics from terroristic organization, they get the blueprints and schematics... just think what going to be furter..

Our audit is not the worst thing can happen to your company, but think twice, pay by money, of maybe the people lives...

Our Rules

Payment Rules:

- We will give Bitcoin wallet to a client directly in chat. (please request BTC wallet once you ready for payment)
- Client should send at first 1 bitcoin on our wallet, just for verification purposes. After we will confirm this transaction, client can send the whole amount.
- After the 1st confirm on blockchain would be received, we will initiate process of providing you with all that was claimed

HOW-to-USE DECRYPTOR

- Before install it on any server or host, you should turn off Anti-virus software and windows defender, also better switch off internet connection.
- Than you have to RUN program "As Administrator", after decryption will be finished you will get the message,so wait for it.
- You have to copy and paste Decryption tool on each Locked server or host and execute it there.
