

Economic Warfare/CFID

Cyber Sword (Damion Sinatra)

Overview: Destruction of Russia's Economy by collapsing their exporting, importing, logistics and agriculture production infrastructure. Followed by a simultaneous attack on the entire financial infrastructure i.e. (banks, financial authority {malware and wipe servers}, crypto exchanges, money transfer). While simultaneously attacking all states currently in deep diplomatic relations (Belarus, Armenia, Russia) which is key as well. We have attacked Armenia; one hacker took down all banks in Armenia for 2-3 hours showing weakness in cyber capabilities of Russia and its allies; excluding **India and China**. By executing this attack, we will "spread thin" the cyber capabilities of the Russian Federation. Immediately after, the Gas and Oil supply chain may and should be struck. **This plan will cause an economic collapse. They are already in a recession.**

Objective: By attacking all levels of the supply chain and constantly taking them down we can completely hinder the Russian economy and/or cause an economic collapse. This will result in economic terror. Russia is currently in a recession; most men are currently being mobilized; this is a key opportunity that should/will work. However, all levels must be attacked with extreme measures: simultaneously. This may also be applied to gas and oil. Access for the gas and oil can be acquired from the importers. Through a sophisticated and covert cyber-attack (malware, DDOS, force-entry, zero-day, DOS, Server Theft). By attacking the importers, we can gain access to the executive Exporters and perhaps Russian military protecting their assets. By destroying the servers, we can/need-to **erase the supply and demand**. Causing a psychological attack and perhaps turn the Putin regime backers against one another. **Or cause an all-out civil uprising, which is ideal.** For the country of Armenia, a broadcast should be done, along with a malware attack to protect the citizens from being completely controlled and forced to mobilize. This protection of Armenia could result in civil war and remove the Putin backers.

Risk Assessment: The UN can easily facilitate the supply chain (i.e., aid and FID); this will allow for a much more feasible diplomatic approach and aid in the negotiations. By attacking the supply chain, the merchants will not be able to track any monetary value resulting in corporate struggle. Also, no company involved will be able to replicate the data. This attack will devastate the newly formed Shanghai Cooperation Organization. This attack may also compromise Chinese intelligence and give us a better understanding of their inner workings. A successful attack will culminate in the ally's currency experiencing an upward trend without the need for bloodshed.

Targets:

Russia:

Exporters:
